SUMMARY

Frontend Developer with 3+ years of experience building scalable web applications with React, Next.js and TypeScript. Specialized in checkout and digital payment flows, design systems and frontend performance.

PROFESSIONAL EXPERIENCE

Frontend Developer - Wispok January 2024 - Present

- Developed and improved payment processes and digital payment workflows for public and private companies, as well as state government agencies, including SIAPA, SEAPAL, IPEJAL, and INFEJAL, processing 90,000+ transactions per month.
- Integrated multiple payment methods, including Adyen, Kushki, AMEX, Google Pay, Apple Pay, cryptocurrency, QR code and cash payments.
- Designed and maintained a design system of 250+ reusable components in a Turborepo monorepo with npm Workspaces and Storybook, used across all products.
- Managed complex state with Redux Toolkit and Zustand and built real-time payment tracking with Firebase for transactional processes.
- Reduced unnecessary API requests and CSS/SCSS bundle size, improving load performance and maintainability.

Freelance UI Designer & Frontend Developer - Fiverr September 2021 - January 2024

- Designed and delivered user interfaces for 40+ clients, including mobile apps, landing pages and web apps in fintech, delivery, sports, AI, exchange, booking and others.
- Built responsive frontends with React and CSS from Figma designs, ensuring consistent experiences across mobile and desktop.

PROJECTS

GasoMX - gasomx.app

Next.js, React, TypeScript, Tailwind CSS, Capacitor, Leaflet, Vercel

- Real-time gas price finder for Mexico using official CNE data, with an interactive map to compare Regular, Premium and Diesel prices at nearby stations.
- Shipped as a web app and an Android app on Google Play from a single codebase with Capacitor, reaching 2,000+ downloads on Google Play and 150+ daily users.

Alcanza - alcanzafinanzas.app

Electron, React, TypeScript, Tailwind CSS, SQLite (sql.js), Vitest

- Cross-platform desktop app (Windows, macOS, Linux) that parses bank statements and tells users whether they can pay their credit cards without interest.
- Built a local-first architecture: PDF parsing and OCR run on-device, so financial data never leaves the user's computer. Added automatic updates that notify users when a new release is available.

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, SASS
Frameworks & Libraries: React, Next.js, Electron, Capacitor, Tailwind CSS
State Management: Redux, Redux Toolkit, Zustand
Tooling: Turborepo, npm Workspaces, pnpm, Vite, Storybook, Git
Backend & Services: Firebase, REST APIs, Vercel
Testing: Playwright, Cypress
Payments: Adyen, Kushki, Google Pay, Apple Pay, Crypto, Cash
Design: Figma, Photoshop

EDUCATION

B.S. Computer Engineering - Universidad de Guadalajara (CUCEI) 2017 - 2021

LANGUAGES

Spanish - Native | English
